

ASF PREVENTION - SIMPLE STEPS

Make your herd health and
biosecurity a priority

1

WHEN TRAVELLING

- Don't bring meat products back to Canada with you (this is illegal).
- Disinfect all footwear/clothing prior to return from travel.
- Ensure human food waste is not fed to your animals.

2

EVALUATE HEALTH AND BIOSECURITY

- Confirm staff/visitors have not traveled to countries where ASF is detected, BEFORE entry to the farm.
- Ensure all visitors abide by on-farm biosecurity practices.

3

CONTACT YOUR VETERINARIAN IMMEDIATELY

- ASF is known to mimic other swine diseases such as Erysipelas, PRRS and Circovirus. Contact a veterinarian ASAP to determine the cause of disease.

4

STOP ALL PIG MOVEMENTS

- Never move/sell or send to auctions/yards sick or compromised pigs on your farm to prevent further spread of infection.

5

NO TABLE SCRAPS

- Do not feed table scraps to swine to prevent disease.

SIGNS OF ASF ILLNESS

- Fever
- Loss of appetite
- Skin hemorrhages
- High mortality within 10 days of clinical signs
